\*Data from isolate totals <30 may be statistically unreliable

(-) Indicates an antibiotic that is either not appropriate for the particular organism, not tested, or the susceptibility is <50%

(R) Indicates intrinsic resistance

a. Daptomycin should not be used to treat isolates for the respiratory tract.

b. Rifampin should not be used alone for antimicrobial therapy.

c. Organisms that are susceptible to tetracycline are also considered susceptible to doxycycline.

d. Treatment of uncomplicated urinary tract infections only.

e. Organisms that are susceptible to erythromycin are also considered susceptible to azithromycin and clarithromycin.

f. Levofloxacin is not recommended (CDC) for treatment or prophylaxis of pregnant women or neonates.

g. Ampicillin appropriate use on isolates from CSF only

Data evaluated per CLSI M39-A4

Questions? Contact Farrah Fuller (Microbiology Supervisor) at 208-625-5838, Sean Cook, D.O. at 208-625-6944, or Kyle W. Caldwell, PharmD at 208-625-5676

ESBL Extended Spectrum Beta Lactamase - 3.9% - 115 isolates out of 2883

CRE Carbapenem Resistant Enterobacteriales - 34 out of 3340 isolates

CP-CRE Carbapenemase Producing Enterobacterales - 1 out of 3340 isolates

CRO-PA Carbapenem Resistant Pseudomonas - 8% - 19 isolates out of 241
